

Setting up Flex and Bison on Windows 10

Simply add the Flex_Bison folder as a PATH system variable and you should be good to go.

- Open “Control Panel”.
- Click on “System”.
- Open “Advanced system settings” from the left panel.
- Choose the “Advanced” tab.
- Click on “Environment Variables...”.
- Find the “PATH” variable down under the “System variables” section.
- Add the Flex_Bison folder’s directory to the corresponding list.
- Open a new Command Prompt and make sure both Flex and Bison are properly set up, by entering the two commands below.
 - flex --version
 - bison --version
